TECHNICAL NOTES

Introduction

Retail trade refers to the resale (sale without transformation) of new and used goods mainly to the general public for personal or household consumption or utilization. Retail trade is one of the important sectors that contributes to Brunei Darussalam's economy, accounting for nearly 22 per cent of the number of enterprises; employing around 11 per cent of the workforce; and generating about 6 per cent of the total operating revenue of the private sector in 2017.

The Retail Sales Index (RSI) measures the movements of retail sales activities. It serves as a leading economic indicator of the retail trade performance as well as consumer spending behavior.

Scope and coverage

The Retail Trade activities are classified in accordance with the **Brunei Darussalam Standard Industrial Classification (BDSIC) 2011** which is based on the United Nations International Standard Industrial Classification (ISIC), Revision 4.

Group	Business Group Description
47	RETAIL TRADE, EXCEPT OF MOTOR VEHICLES AND MOTORCYCLES
471	Retail sale of non-specialized stores
472	Retail sale of food and beverages in specialized stores
473	Retail sale of automotive fuel in specialized stores
474	Retail sale of information and communication equipment in specialized stores
475	Retail sale of other household equipment in specialized stores
476	Retail sale of cultural and recreational goods in specialized stores
477	Retail sale of other goods in specialized stores
478	Retail sale via stalls and markets
479	Retail trade not in stores, stalls or markets

Data Sources

RSI is compiled using data from the Quarterly Survey of Businesses (QSB) conducted by the Department of Economic Planning and Statistics (JPES) every quarter. A sample of 362 enterprises are covered in the QSB for retail trade activities.

The weight for each activity reflects its relative importance in the overall retail trade sector. The weights are computed based on the retail sales of each activity obtained from the Annual Census of Enterprises (ACE) for reference year 2017.

Index Compilation

The overall RSI is a weighted average of indices at the detailed activity level. The sales index at the activity level is derived by aggregating the sales value of enterprises belonging to the same activity and dividing it by the average quarterly sales for the same activity in the base year (2017). The overall RSI is then computed by summing all the weighted activities indices using the Laspeyres formula.

The indices are based on sales values at current prices. Hence the changes in the value indices may be due to changes in both price and quantity. The indices are also not seasonally adjusted.

Revision Policy

Revisions will only be made to the published figures for the previous periods if there are any changes based on the latest available data.
